

BOBBIN HOLDERS FOR CARPET CREELS

For your creeling needs we offer the following bobbin holders:

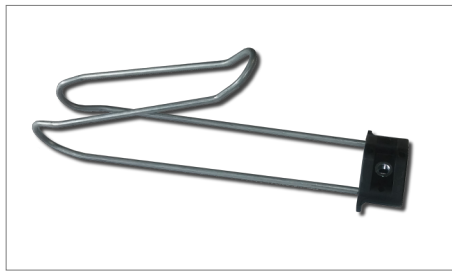

SINGLE SPRING

The single spring holds both cones and tubes with **2 points of contact**.

The **injection moulded base** is moulded around the spring instead of having the spring welded to a metal plate. Thanks to this design, metal fatigue is no longer a factor.

The **hex nut** in the base allows for a tight fixation on the creel.

Suitable for shafts with a diameter of 12 millimeters.

DOUBLE SPRING

The double spring holds both cones and tubes with **4 points of contact**.

The **injection moulded base** is moulded around the spring instead of having the spring welded to a metal plate. Thanks to this design, metal fatigue is no longer a factor.

A **high quality metal nut** is embedded in the base. This prevents wear on the inner thread of the base. The double spring comes with a fitting bolt.

The **tube-stop** ensures correct positioning of the bobbin.

Suitable for shafts with a diameter of 12 millimeters.

BOBBIN HOLDER

Universal bobbin holder

This bobbin holder holds both cones and tubes with an inner diameter ranging from **46 to 89 millimeters**.

High clamping force thanks to the high resilience polymer spring.

The **toothed outer profile** provides a better grip on the bobbin.
