

All-in-One Cruising Fire Pumps FS

Traditional Portable Fire Pumps

power just one high flow fire fighting system (1 motor pump) and (apart from big fires) do not operate to best effects,
require separate transportation of machinery, equipment and water in addition to its own weight,
show up to 200 kg standardized own weight (DIN-EN 14466) and in such a case are prohibited by Labour Protection Rules and
look rather nostalgic when recruiting Junior Staff, caused by just one fire fight method and sweat generating weights.

Since years being requested by firefighters,

All-In-One Cruising Fire Pumps ¹⁾

New!

now work with full fire and rescue techniques and involve up to 6 fire fighting methods, all applied by quick attack,
have water, mobile electricity, aiding and rescue techniques as well as compressed air and further material aboard,
can apply for the first time all fighting systems in buildings and endangered areas, thereby breaking the monopoly of conventional high flow water systems and
ensure simultaneous actions of fire fighting and securing squads, for the first time permitting the application of all fire fight methods.

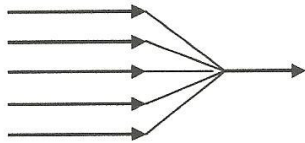

Fully equipped ATV and UTV:

quick- strong – affordable
On-Road, Off-Road, in traffic jams
in production halls and parking garages
on forest lanes and sidewalks

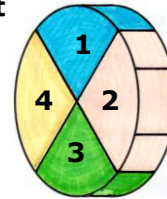

Quick Attack

now extract just one hose for all systems without hose assemblage

Quick Fire Fight

Select
1-Squad- or
2-Squad-
Operation

... then turn
Selecting Ring
to kind of
fire fight
... ready!

Drive up fully relaxed

Quick Training

Recruiting Junior Staff

immediately with passenger car license:

Labour Protection Rules observed
now only one training required
to cover everything: quite simply!
excite volunteers by convincing power:
instead by heaving sweat producing weights
