quality: tarpaulin with eyelets all round and fitted drawstring
weight: aprx. 2,0 kg
additional
equipment: packaging bag for folded tarpaulin, 600 x 400 x 100 mm

Operative range:

The TARPAULIN FOR UNDRESSING CLOTHES AND TRANSPORT is designed for putting down contaminated devices and/or taking off protection suits after a hazmat operation and for their disposal at the contaminated area resp. for cleaning them afterwards. After finishing the operation the person wearing the protection suit can step into the middle of the spread tarpaulin and take off the suit there. Then he leaves the tarpaulin and it can be tightened like a disposal bag by pulling the drawstring. The contaminated equipment is safely stored. The danger of spreading the contamination is avoided.
